The status displays provide information on the operating status of the appliance.

- Press the "i" button (1) to activate the status displays.

The display (2) then shows the current status code, for example "S. 4" for burner operation. The table below explains the most important status codes.

In switching phases, for example on starting up again after the flame was extinguished, the status message "S." briefly appears.

- Press the "i" button (1) again to switch the display back to normal mode.

Note
The ecoTEC exclusive display has also cleartext for a direct information

4.8 Troubleshooting

In the unlikely event that a problem occurs with the operation of the ecoTEC boiler, the following points should be checked:

Boiler fails to operate:

- Is the gas supply turned on (see 4.3.1)?
- Is the water supply turned on (ecoTEC combination boilers only, see 4.3.1)?
- Is there enough water in the heating system (see 4.3.2)?
- Is the electrical supply switched ON?
- Is the main ON/OFF control in the "ON" position (switch position "I", see 4.4)?
- Is there an ignition problem (see 4.8.2)?

Hot water operates but no central heating (ecoTEC combination boilers only)

- Is the heating turned ON (see 4.6.1)?
- Are all external heating controls ON (see 4.6.3)?

Caution
Inappropriate modifications can cause damage. If your boiler still does not operate then please consult your installer or Vaillant Service Solutions (0870 6060 777).

4.8.1 Problems due to low system water pressure

The device switches to "Fault" if the water pressure in the heating system is too low. This malfunction is indicated by the fault code "F.22" (dry fire) or "F.23" or "F.24" (lack of water).

You can only start up the appliance again when the heating system is sufficiently filled with water.

4.8.2 Ignition problems

If the burner fails to ignite after five attempts, the device does not start up and switches to "Fault". This is indicated by the fault code "F.28" or "F.29" in the display. On ecoTEC plus appliances the display also shows the flame symbol with a cross through it (1). On ecoTEC pro appliances, the red LED (2) also lights up.

Automatic ignition can only take place after you manually reset the fault.

- To reset the fault, press the reset button (3) and hold it down for one second.

Fig. 4.17 Troubleshooting

Caution
If the boiler still shuts off after three attempts of resetting, please consult your installer or Vaillant Service Solutions.

4.8.3 Flue problems

The appliances are fitted with a fan. If the fan does not work properly, the appliance will switch itself off.

The display shows the symbols \emptyset and \emptyset and the fault message "F.32".

Note
If contacting Vaillant Service Solutions please remember to quote the fault code, as this will help to pinpoint the fault.

4.9 Turning off the boiler

Fig. 4.18 Switching off the appliance

- Turn the main ON/OFF control (1) to the „0" position.
